How to read this codex

Upgrade trees

- **Trunk:** every tower is built at Tier 1 and upgraded once to Tier 2.
- **Three branches (A, B, C)** open at Tier 2. Each is a **specialization** (it changes how the tower works), three more upgrades, then a **mastery**. U, I and O buy the next upgrade on A, B and C; E opens the tree.
- **Primary and secondary:** you can climb two branches freely, up to two upgrades on each. The first to get its **third** upgrade becomes the primary and can go on to its mastery; the other is capped where it is. The third branch locks as soon as two are started.
- **A secondary keeps its full effects**, downsides included: its upgrades add their differences on top of the primary. A branch marked **changes the attack** adds its attack alongside the primary's instead (see each tower's Combinations note).
- **Masteries** need that tower's Mastery research in the Research Lab; one node unlocks all three.

Reading the upgrade tables

- The **specialization** and **mastery** rows list the tower's full stats at that point.
- Upgrades 2-4 list what they add or change (+3 dmg , +0.4/s).
- **Costs** are base prices in credits. Harder modes multiply every build and upgrade price (table on the right).
- **Scrapyard** stats: cr per round is paid at each round clear and grows with the round like kill credits; kill credits and off upgrades apply inside its field and don't stack between Scrapyards.
- Stat terms: dmg per hit (per flechette with $\times n$), dps damage per second for beams, /s attacks per second, range / field / radius in pixels (a tile is 48 px).

Difficulty modes

Mode	Rounds	Shields	Tower prices	Medal RP
 Easy	40	200	$\times 1.0$	1
 Medium	60	100	$\times 1.0$	2
 Hard	80	50	$\times 1.1$	3
 Nightmare	100	25	$\times 1.5$	4
 Cataclysm	120	1	$\times 2.0$	5

Every run starts with 300 credits. Clearing a mode's last round earns the sector's medal for that mode, and endless mode begins straight away.

Enemy scaling

- **Health** grows every round (about $\times 7$ by round 40), then also compounds 4% per round from round 40. Each enemy card lists its health at sample rounds.
- **Speed** grows 0.45% per round, up to +50% (bosses up to +25%).
- **Credits per kill** grow with health: $\text{base} \times (\text{round health multiplier})^{0.3}$.
- **Armor** removes that much damage from every hit. Barriers absorb damage before the hull and ignore armor.
- **Leak cost** is how many core shields an enemy takes if it reaches the core.
